All in One AI: what it is and what you can do with it

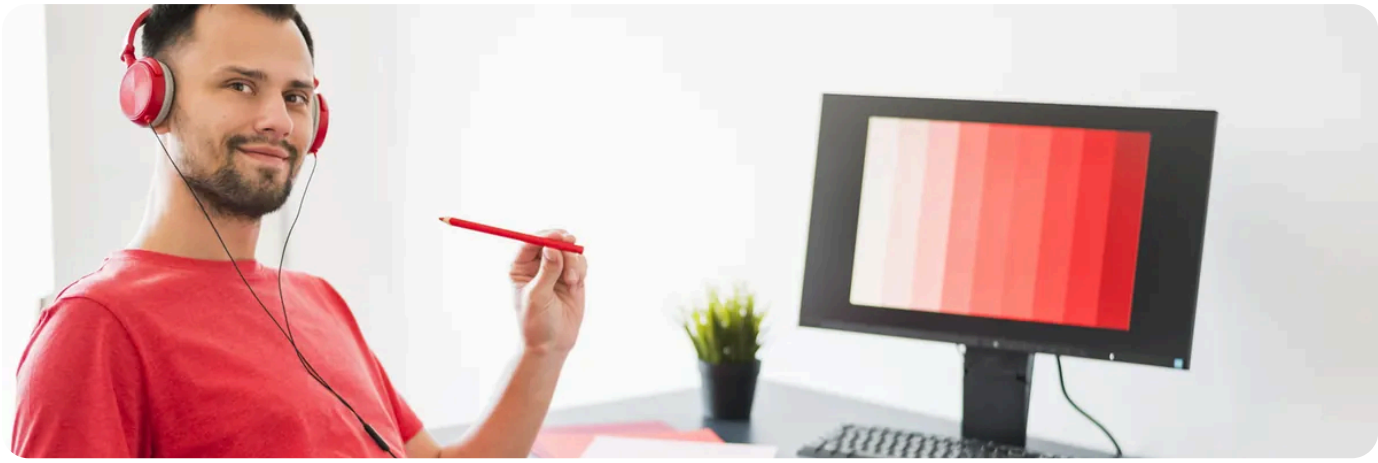
All in One AI Created on **November 26, 2026** 2 min read



In short: All in One AI is our artificial intelligence platform. It gives you more than 600 text, image, video and audio models in one place, with one account: your MozOut account. You use them on the All in One AI page in My MozOut, or in your own software through the API. There is a summary on the **All in One AI** page.

What you can do with it

You want to	How
Chat, summarise, translate or write	With the text models, in the Playground or through the API. See **chatting in the Playground**.
Generate images	In the Playground, on the Image tab, or through the API.
Generate video and voice	Through the API, the `aio` command in the terminal or the MCP server.
Have an assistant that follows your rules	With agents: your own instructions, knowledge and tools, used through the API like a model.
Code with AI	In Claude Code, Cursor, Codex and other tools, paid with credits or with the Coding Plan.

One key for everything

The key is the same one you use in the **API Center**. You do not need another account or another key for AI. The API works with the OpenAI SDK: software that already uses it switches to our models by changing only the address and the key. See **using the OpenAI SDK**.

How you pay

With **AI credits**, bought in My MozOut. Each model has its own price in credits, and you see it before you use it. Credits are kept apart from your account balance in USD. If you code every day there is also the **Coding Plan**, a monthly plan with points. See **how to buy credits** and **how the plans work**.

You can try it without spending anything.

When you activate All in One AI you get 100 welcome credits. And with a Sandbox key the API answers in the right format without calling any model and without charging you. See **testing in the Sandbox**.

RECOMMENDED

Want to see the models and try them? Open All in One AI in My MozOut.
