Creating your first AI image in the All in One AI Playground, step by step

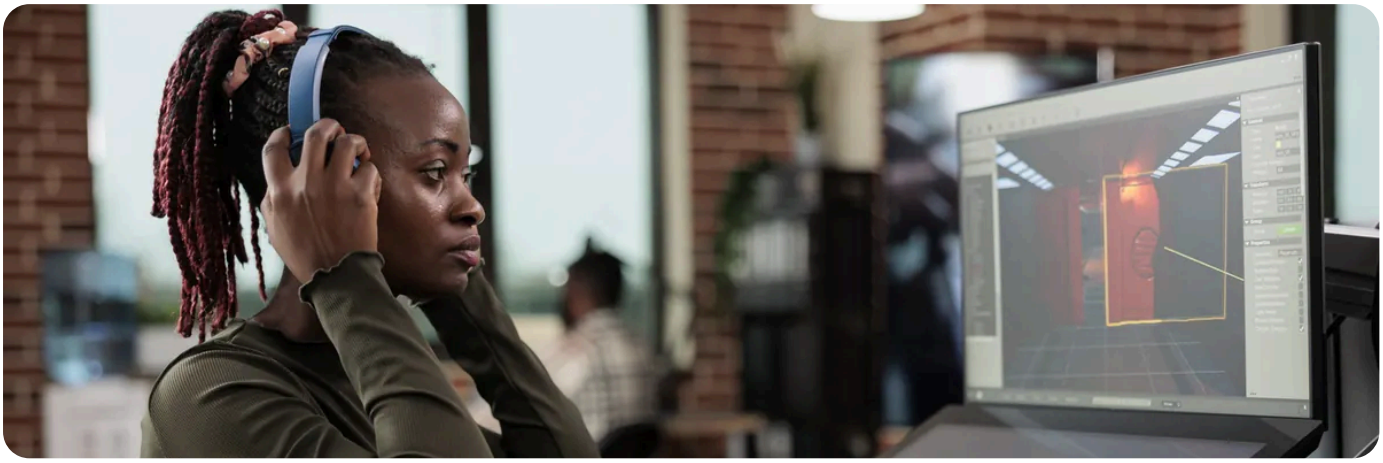
All in One AI | Created on **November 26, 2026** | 3 min read



In short: in My MozOut, open All in One AI, go to the «Playground» tab and choose «Image». You describe what you want to see, pick the model, check the expected cost and click «Generate image». When you activate All in One AI you get 100 free credits to try it out. The **AI images** page shows what else you can do with images.

Before you start

Sign in to My MozOut with the main account: only the account owner can use All in One AI. The Playground does not ask for an API key. It spends AI credits, which have their own balance, separate from your account credit. If you have not activated All in One AI yet, see **how to activate it and get the 100 welcome credits**.

Step by step

1. Open the **All in One AI Playground** and choose «Image», next to «Chat».
2. Under «Mode», choose «Sandbox (free)» for your first test. You get a sample image and spend no credits. For the real image, switch back to «Production».
3. Pick the model. Only the models that create images from text show here, each with its price.
4. In «Describe the image», write what you want to see, up to 4,000 characters. For example: «a basket of tropical fruit on a wooden table, morning light».
5. If the model has options, such as the size, they show below, with a value already chosen. If you are not sure what to change, leave them as they are.
6. Check the expected cost and click «Generate image».

What happens next

The expected cost is reserved from your balance. When the image is ready, you pay the real cost and the difference comes back. If the generation fails, all the credits come back and you see «The generation failed. The credits were refunded.»

Some images take longer. If you see «The image is taking a while», you do not need to wait on the page: the result shows up shortly on the «History» tab.

Your requests and images are kept under «Conversations». To start a new idea, click «New conversation». On the «History» tab, these requests show as «All in One AI Playground».

Models that need a starting image

, for example to edit a photo, are not used in the Playground. You see «This model needs an input image: use it through the API.» In that case, see **how to create images through the API**.

Download the images you will use

and keep your own copy. To get there faster, see **how to ask AI for an image**. Before an image goes on your website, see **what to check before you publish**.

RECOMMENDED

Want to see what you can do with images in All in One AI? See the AI images page.
