Choosing an image model in All in One AI: the Models tab, the price and the options

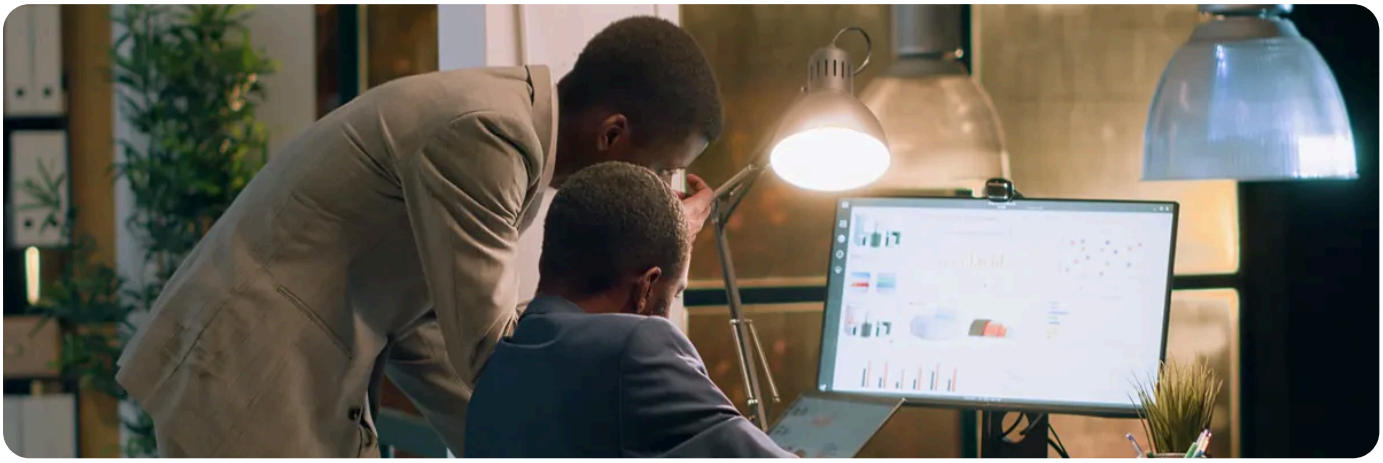
All in One AI Created on **November 26, 2026** 3 min read



In short: on the «Models» tab of All in One AI, choose «Image» and compare the models by price per image and by the job each one does. The ones that create images from text have a «Try it» button, which opens the Playground with that model. The ones that need a starting image are used through the API. More on the **AI images** page.

What you see for each model

Open the **«Models» tab**. All in One AI has more than 600 models, for text, image, video and audio, and the «Image» filter shows only the image ones. To find a particular model, search by name or id.

Column	What it tells you
Model	The name and the id. The id is the value you send in `model` through the API.
Type	Image, with the category below. `text-to-image`, for example, creates an image from a description.
Price	The credits per image.
Buttons	«Copy the id» and, on the models that create from text, «Try it».

How to choose

1. Start from the job: creating a new image from a description, or working on an image you already have. Each model's category tells you which is which.

2. Pick two or three models at different prices and use the same request on all of them, in the Playground.

3. Compare the result with what you paid. For backgrounds and illustrations, a cheaper model may be enough. For the main image of a page, paying more may be worth it.

4. Keep the one that works and note its id, so you always use the same one in the Playground and through the API.

Each model's options

Each model has its own fields, such as the image size. In the Playground they show below the request, under «Model options», with a value already chosen. Only the fields you type go there: text, numbers, yes or no, and lists of choices.

Through the API, `GET /v1/models/{id}` returns in `input` the name, type, accepted values and default of each field. This is also where you see the file fields, such as the starting image.

If the model needs an input image

, the Playground says «This model needs an input image: use it through the API.» The image goes as a public address, for example a photo already on your website, at https://www.yourcompany.com/img/photo.jpg. See **how to create images through the API**.

Prices can change.

The current price of each model is always on the «Models» tab and in `GET /v1/models`. Before a large batch, check it there. To do the sums, see **what an AI image costs**.

RECOMMENDED

Want to know what each image model does? See the AI images page.
