How to set up your e-mail in Thunderbird

E-mail Created on **August 14, 2026** Updated on **October 4, 2026** 1 min read

Thunderbird can detect this server's settings automatically - you only need to type your name, e-mail and password.

Automatic setup

1. In Thunderbird, open **Account Settings → Account Actions → Add Mail Account**.
2. Enter your name, full e-mail address and password, then click **Continue**.
3. Thunderbird searches for the settings on its own and proposes **IMAP**, server *mail.yourdomain.com*, port **993** for incoming and port **465** for outgoing, both over SSL/TLS.
4. Once it shows those settings, click **Done** to finish.

If auto-detection doesn't find it,
click **Configure manually** and fill in the same values by hand:

Setting	Incoming (IMAP)	Outgoing (SMTP)
Server	**mail.yourdomain.com** - replace with your own domain	
Port	**993**	**465**
Security	SSL/TLS	SSL/TLS

Username: your full e-mail address - **Password:** the mailbox password you set in cPanel (not your portal or cPanel password).

NEED A HAND?

Thunderbird still not connecting? Let's sort it out together.
