Choosing a voice model: the audio type, the text field and the price per generation

AI Video & Voice Created on **November 28, 2026** 2 min read

In short: voice models have the `audio` type («Audio» on the Models tab), and the ones that read a text aloud have the `text-to-speech` category. The text goes in the `text` field. The price comes in `pricing`: in the example in our documentation it is per generation, that is, per audio file you ask for.

On the Models tab

1. Open the **Models** tab of All in One AI and click **Audio**.
2. On each line you see the name, the id, the category and the price, for example in «credits per generation».
3. «Copy the id» copies the id for the API. For text-to-speech models, «Try it» opens the Voice tab of the Playground.

Through the API

The list with `type=audio`:

```
curl "https://api.mozout.com/v1/models?type=audio" \
  -H "Authorization: Bearer $MOZOUT_API_KEY"
```

To see the fields of a model, use `GET /v1/models/{id}`. The text to read goes in `text`; some models use `prompt`, and the `input` of each model says which. The request from the example in our documentation:

```
{
  "model": "elevenlabs/v3/text-to-speech",
  "input": {"text": "Hello! Thank you for calling. How can we help you today?"}
}
```

It goes to `POST /v1/media/generations`, like images and videos. Then check the status until it is `completed` and download the file from `outputs`.

The price per generation

In `pricing`, `unit` says how the price is counted and `credits` how much each unit costs. In the example in our documentation, `elevenlabs/v3/text-to-speech` shows 40 credits per generation. Three messages for your phone line are three generations. Example prices change: always read `unit` and `credits` for the model you choose. As with images, the request reserves the credits and, at the end, charges the real cost and returns the rest.

Listening before you choose

On the Voice tab of the **Playground**, type the text, click «Generate voice», listen and use «Download the audio». The prompts and the audio files are saved under «Conversations». In Sandbox mode, you get a sample audio without spending credits. To choose the model, test it with a real text, in the language you will use, and listen to the pronunciation and the tone.

Before you put the voice in an advert or on your phone line, see **what to check before you publish**.

RECOMMENDED

Want to hear a voice before you use it? Try it in the All in One AI Playground.
