Checking the points left: the Plan tab, GET /v1/ai/balance and aio balance

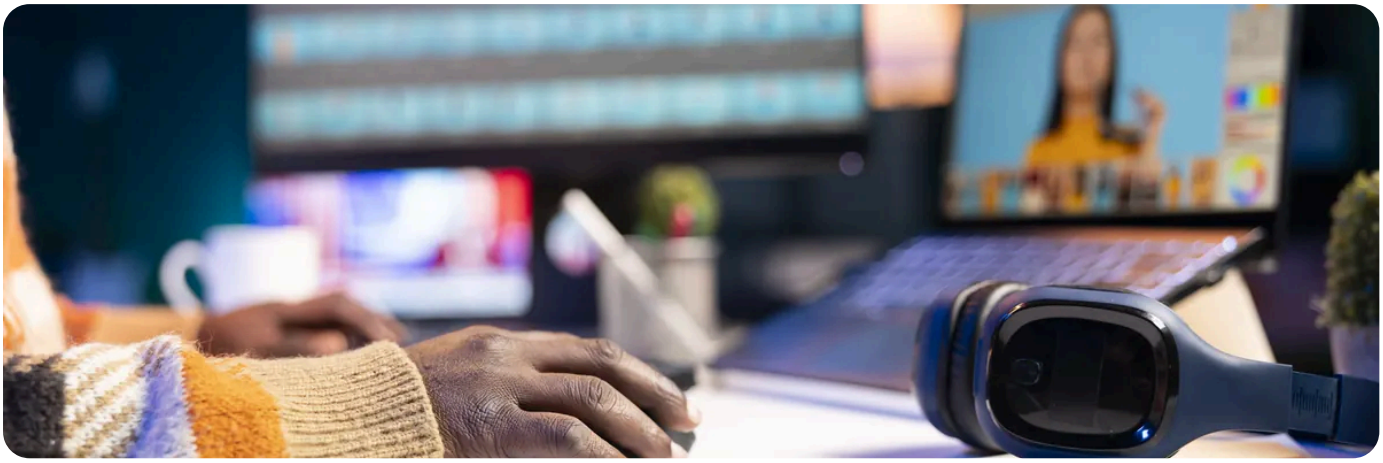
Coding Plan Created on **November 28, 2026** 2 min read



There are several ways to see how many Coding Plan points are left: in the Plan tab, through the API, in the terminal and inside the agent. None of them spends points.

In the Plan tab

With an active plan, the **Plan tab** shows two bars, This week and This month. Each one shows the points used and the total, how many are left, the percentage and when it resets. When a limit runs out, the bar says Used up. Times show in local time, and the tab says which time zone it uses. Above them is the date the plan renews.

Through the API: GET /v1/ai/balance

You need a key with `ai:read`. On Linux and macOS, and then in Windows PowerShell:

```
curl "https://api.mozout.com/v1/ai/balance" -H "Authorization: Bearer $MOZOUT_API_KEY"
```

```
curl.exe "https://api.mozout.com/v1/ai/balance" -H "Authorization: Bearer $env:MOZOUT_API_KEY"
```

The answer has the credits and, with a plan, the `subscription` object:

```
{
  "data": {
    "credits": 1250.5,
    "currency": "credits",
    "subscription": {
      "plan": "plus",
      "plan_name": "Plus",
      "status": "active",
      "weekly_remaining": 61250000,
      "monthly_remaining": 143750000,
      "weekly_resets_at": "2026-11-23T00:00:00+00:00",
```

```
      "monthly_resets_at": "2026-12-10T00:00:00+00:00",
      "fallback_to_credits": true
    }
  }
}
```

Field	What it says
`plan` and `plan_name`	The plan code and name.
`status`	The plan status. Only an `active` plan spends points.
`weekly_remaining` and `monthly_remaining`	The points left this week and in this monthly cycle.
`weekly_resets_at` and `monthly_resets_at`	When the weekly and monthly points come back, in ISO 8601.
`fallback_to_credits`	`true` if requests carry on with credits when the points run out.

Without a plan, `subscription` does not come.

In the terminal: aio balance

```
aio balance
aio balance --json
```

Shows your credits and, with a plan, the points left this week and this month, the reset dates and whether credits are used when the points run out. With `--json`, the answer can feed another program.

Inside the agent

With the MCP server set up, ask the agent how many points you have left. It uses the `get_balance` tool, which costs nothing.

In a program of your own, read `weekly_remaining` before a big task and warn when it is low.
