One key for text, image, video and voice models in the AI gateway

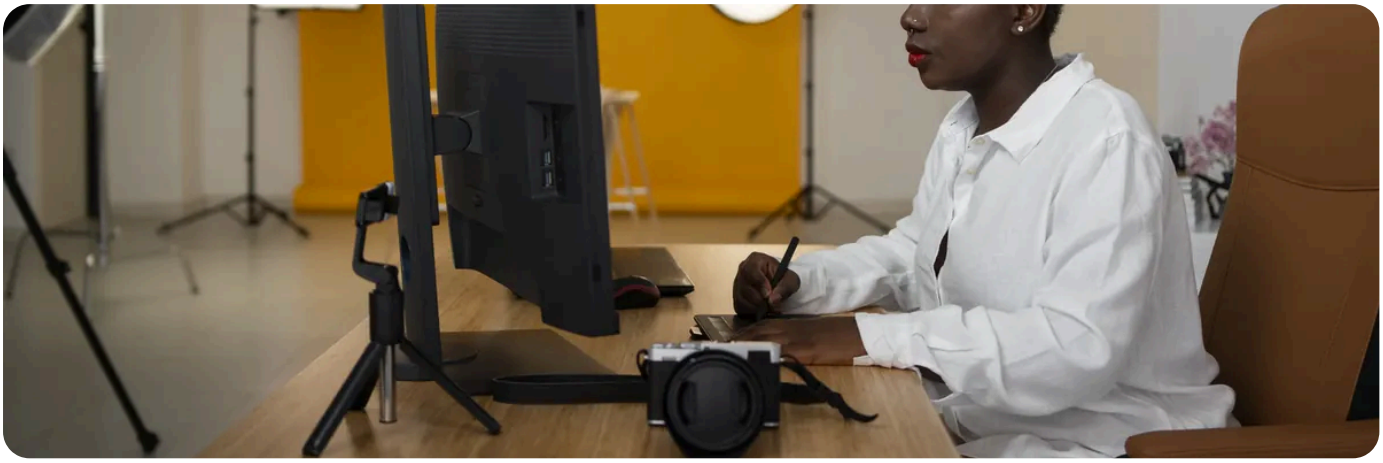
Using the AI API Created on **November 29, 2026** 2 min read



In the MozOut AI gateway there is no separate key for chat and another for images. The same key from the **API Center** works for text, image, video and voice models, for your agents, for the `aio` command and for the MCP server. Everything spends from the same credit balance.

What the same key does

You want to	Request	Permission
Chat with a text model	`POST /v1/chat/completions`	`ai:write`
Use one of your agents	`POST /v1/chat/completions`, with `agent/` followed by the id in the `model` field	`ai:write`
Generate an image, a video or a voice	`POST /v1/media/generations` and `GET /v1/media/generations/{id}`	`ai:write`
See the models, the prices and the balance	`GET /v1/models` and `GET /v1/ai/balance`	`ai:read`
Buy credits with your account credit	`POST /v1/ai/credits/purchase`	`billing:purchase` and `ai:write`

An image request with the same key

```
curl "api.mozout.com/v1/media/generations" \
-H "Authorization: Bearer $MOZOUT_API_KEY" \
-H "Content-Type: application/json" \
```

```
-d '{"model": "openai/gpt-image-2/text-to-image", "input": {"prompt": "A bright, modern office with plants", "size": "1024x1024"}}'
```

The response has the `id` of the generation and the reserved credits. Then you ask for the status until it says `completed`, with the file in `outputs`. See **the full image request**.

One key per program

You can have several keys on the same account. The best way is to create one for each program that uses AI, with only `ai:read` and `ai:write`. That way you see what each one spends in History and, if one is exposed, you revoke only that one. When you create the key you can also set a spending limit. See **how to create an API key**.

The key gives access to your whole balance.
Keep it only on your server, in an environment variable, and never in code that runs in the browser or in a mobile app. See **how to keep your key safe**.

RECOMMENDED

Need a key? Create it in the API Center and use it in All in One AI.
