Our API docs in Portuguese or English: where each language lives and how to switch

WhatsApp & APIs Created on **November 13, 2026** 2 min read

The short answer: the whole documentation exists in **English** and **Portuguese**, page by page. The language selector at the top takes you to the **same page** in the other language, without going back to the start.

Where each language lives

One language sits at the root of the address and the other in its own folder: `/en` for English or `/pt` for Portuguese. The root holds the main language of the MozOut documentation. If you open the folder of the language that is at the root, the documentation takes you to the same place, so links with `/en` or `/pt` always work.

Shortcuts: **the documentation in English** and **the documentation in Portuguese**.

On some brands, the selector also lists the countries of the website; each country leads to the matching language of the documentation.

What changes with the language, and what does not

What	With the language
Texts, headings and menus	Translated.
Code examples	The same, with the `Accept-Language` header in the language of the page.
Field names, paths, permissions and error codes	In English in both languages.
API error messages	Depend on the `Accept-Language` header of the request, not on the language of the page. Without the header, they come in English.
Search	Each language has its own index.
Markdown versions	One per page and per language.

What	With the language
llms.txt	A single file, with both lists.

The message language in your program

To get error messages in Portuguese, your program sends:

```
Accept-Language: pt
```

The error `code` field **never changes with the language**. That is what your program should decide on; the message is for showing to people.

Working with a Portuguese-speaking team?
Send them the links to the Portuguese version, which has the same content. See **how to hand the documentation to a developer**.

RECOMMENDED

Prefer Portuguese? The same documentation, page by page.

See the Portuguese version →
