Cline with All in One AI: the OpenAI Compatible provider, field by field

All in One AI Created on **November 28, 2026** 3 min read

Cline is a VS Code extension that codes with you: it reads the project, edits files and runs commands, with your permission. With the **OpenAI Compatible** provider, it uses All in One AI models, with the MozOut key. You set it up in the extension settings, with no files.

Before you start

1. Create a key in the **API Center** with the `ai:read` and `ai:write` permissions. Use a `sandbox_` key to check the setup without spending and a `prod_` key to work. The fields are explained in **creating an API key**.
2. Have AI credits or an active Coding Plan in **All in One AI**.
3. Have the Cline extension installed in VS Code.

Field by field

1. Open the Cline settings (the gear icon).
2. In **API Provider**, choose **OpenAI Compatible**.
3. In **Base URL**, type `https://api.mozout.com/v1`.
4. In **API Key**, paste your key.

5 In **Model ID**, type the model id, for example `moonshotai/kimi-k2.7-code`.

6 In **Model Configuration**, put the model's context in **Context Window** (`262144` for this one) and `16000` in **Max Output Tokens**. Leave the rest as it is.

We reserve credits for the maximum output the tool asks for in each answer. That is why the examples ask for 16,000 tokens: it is enough for coding and needs a smaller balance than a higher value. Each model's context is in the table below and in the `context_length` field of the model list.

Checking it works

Start a new task in Cline and say "hello". With a `sandbox_` key, the answer is always "Resposta de teste (sandbox).". Then switch to the `prod_` key in **API Key**: with the sandbox one, Cline cannot write code.

Another model

Cline uses the model in **Model ID**. To change it, replace the id and adjust **Context Window**. Use a model that supports tools:

Model	Context	What for
`moonshotai/kimi-k2.7-code`	262,144 tokens	Built for coding: the starting point for everyday work.
`deepseek-ai/deepseek-v4-pro`	1,048,576 tokens	Strong reasoning, for big changes and hard bugs.
`zai-org/glm-5.2`	1,048,576 tokens	Made for agents: handles tools well in long tasks.
`deepseek-ai/deepseek-v4-flash`	1,048,576 tokens	Fast and cheap, for background tasks and short questions.

The ids are in the Models tab of **All in One AI** or in the API list. On Linux and macOS:

```
curl "https://api.mozout.com/v1/models?type=text" -H "Authorization: Bearer $MOZOUT_API_KEY"
```

In Windows PowerShell:

```
curl.exe "https://api.mozout.com/v1/models?type=text" -H "Authorization: Bearer $env:MOZOUT_API_KEY"
```

Each model comes with its `id` (always with the slash), its `context_length` and its price in `pricing`. Listing the models spends no credits.

For Cline to create images, video and voice, see **the MCP server in Cursor, Windsurf and Cline**. If you used Roo Code: the extension was discontinued on 15 May 2026, and its page points to Cline as an alternative. The steps are the same.

RECOMMENDED

Want our models in Cline? Visit the Coding with AI page.
