Up to 50 agents per account: one agent for each job

Creating AI Agents Created on **November 28, 2026** 2 min read

Each account can have up to 50 agents in **All in One AI**. Each one has its own model, its own instructions, up to 200 KB of knowledge and the tools you choose. It is worth using: an agent that does one thing answers better and costs less than one that tries to do everything.

Why one agent per job

The instructions and the knowledge go with every request. A single agent, with the texts for customer support, sales and the internal team, pays for all of that even when someone only asks for the opening hours. With separate agents, each request carries only what matters.

And you can give each agent the model, temperature, maximum tokens and tools that make sense for its job.

An example

Agent	Model	Tools
Website frequent questions	A cheap model, such as `deepseek-ai/deepseek-v4-flash`	Date and time, to know whether you are open
Social media posts	Any model, with a higher temperature	None
Internal team support	A model that supports tools	Read web pages and Search the web

Names you can recognise

The name can be up to 100 characters long. The description is optional and only you see it. The Your agents list shows the name, the description, the `agent/...` id, the model, the tools and the status. The list shows 10 at a time; under Show you can pick 25, 50, 100 or all.

What each one spends

Use one **API Center** key for each program that calls an agent. In the All in One AI History, filter by key and see the requests and credits of each one. Tests in Try it show up as "All in One AI Playground", with the model `agent/<id>`. How to create that key is in **a key just for your agent**.

When you reach 50

Delete the agents you no longer use. Deleting also removes the knowledge and cannot be undone, so keep what you want to reuse first. A paused agent still counts towards the 50.

RECOMMENDED

Want an assistant for each part of your business? See All in One AI.
