Offering All in One AI to your own customers from WHMCS: the AI module

Integrations & VPS Agents Created on **November 28, 2026** 3 min read

If you sell services to your customers with WHMCS, you can also sell them AI credit packs. The MozOut AI module gives each customer a credit balance, and the customer asks questions to the AI models on the service page, in your WHMCS. The module is open source and it is on MozOut Git, listed on the **SDKs and integrations** page of the docs.

How the balance works

At MozOut there is a single AI credit balance per account: yours. The module keeps, for each WHMCS service, how many credits the customer has and how many were used. Each answer costs what the API rules say (tokens times the model price, rounded up to 0.01, with a minimum of 0.01), and the real cost comes out of your balance at MozOut.

> **Keep your AI balance at MozOut above what your customers can spend.**
> If your balance runs out, answers stop for everyone.

Installing

1. Copy the module folder, found in `modules/servers` in the package, into the same folder of your WHMCS.
2. In Setup > Servers, add a server with the MozOut All in One AI (API) module. In the hostname, type `api.mozout.com`; in the password, the API key. The username is optional: `sandbox` or `production`.
3. In the product, on the Module tab, fill in the options in the table below.
4. Give the key the `ai:read` and `ai:write` permissions. Add `billing:purchase` only if the module should also buy the credits at MozOut.

The product options

Option	What it does
Credits per period	The credits the customer gets when the service is created and on each renewal.
Buy the credits at the brand	Buys the same quantity with your account credit, at least 1,000 credits at a time.
On renewal	"Add to the balance" or "Reset the balance".
Allowed models	Ids from `GET /v1/models`, separated by commas. Empty means all text models.
Max tokens per answer	Caps the length of each answer, and what it can cost.
Message language	"Automatic" follows the language of the admin or of the customer; you can also fix English or Portuguese.

What the customer sees, and what you see

On the service page, the customer sees the balance, the credits used and the number of requests. They pick the model, write the question, up to 8,000 characters, and get the answer with its cost. They also see the latest requests. If the balance is not enough, the module says how many credits the question needs.

In the admin area, you see each customer's balance, can add or remove credits and see your account's AI balance at MozOut. Questions and answers are never stored or logged: only the model, the tokens and the cost are kept.

With a `sandbox_` key, the chat answers "Resposta de teste (sandbox)." and costs 0: set up the product that way and switch to the `prod_` key at the end. A Coding Plan is one per account, so it cannot be resold per customer with this module.
