Checking Cline with a sandbox_ key: the answer you should see

Cline & Roo Code Created on **November 28, 2026** 2 min read

Before you put Cline to work, it is worth checking the setup with a `sandbox_` key. It spends no credits or points, and the answer shows at once whether the address, the key and the id are right.

The test

1. In the **API Center**, create a key in **Sandbox** mode, with `ai:read` and `ai:write`.
2. In the Cline settings, with **API Provider** set to **OpenAI Compatible** and **Base URL** set to `https://api.mozout.com/v1`, paste the `sandbox_` key in **API Key**.
3. In **Model ID**, enter the id, for example `moonshotai/kimi-k2.7-code`.
4. Start a new task and say "hello".

The right answer

"Resposta de teste (sandbox)." The sandbox does not call the model and always answers with this sentence, in the format Cline expects, with zero tokens. If you see it, everything is right.

What shows up	What to do
"Resposta de teste (sandbox)."	Switch to the `prod_` key and start working.
Invalid key or `401`	Paste the key in **API Key** again, with no extra spaces.
Model not found or `404` `model_not_found`	Type the id with the slash, exactly as it is in the catalogue.

What shows up	What to do
`404 not_found` or a network error	Check the **Base URL**: `https://api.mozout.com/v1`, with `/v1`.

Why Cline cannot code with it

With the sandbox, the answer is always the same sentence. Cline gets nothing to edit and no commands to run, so it does not touch the project. After the test, switch to the `prod_` key in **API Key**.

And the MCP server

If you have the MCP server in Cline, the sandbox works there too: the `chat` tool answers with the same sentence and a generation is ready at once, with a sample link and 0 credits. The model list, the prices and the balance are the real ones.

In **History**, choose the **Sandbox** mode to see the test requests.

RECOMMENDED

Want our models in Cline? Visit the Coding with AI page.
