Checking Aider with a sandbox_ key: the answer you should see

Aider Created on **November 28, 2026** 2 min read

With a `sandbox_` key, the API answers in the same format, but calls no model and charges nothing. It is how you check the address, the key and the model name in Aider before you spend credits or points.

1. A test key

In the **API Center**, create a key in Sandbox mode, with `ai:read` and `ai:write`. It starts with `sandbox_`. Put it in the variable Aider reads, instead of the `prod_` key. On Linux and macOS:

```
export OPENAI_API_KEY="sandbox_..."
```

On Windows, close the terminal and open a new one after `setx`:

```
setx OPENAI_API_KEY "sandbox_..."
```

2. One request only

With `--message`, Aider sends one message, shows the answer and exits:

```
cd my-project
aider --model openai/moonshotai/kimi-k2.7-code --message "hello"
```

3. The right answer

If everything is right, the answer is always this, whatever you ask:

```
Resposta de teste (sandbox).
```

Nothing is spent: the tokens come back as zero and the balance does not change. The "Unknown context window size" warning may still show, because it comes from Aider. With this key Aider cannot change files, because the answer is always the same.

If you see something else

What you see	What it means
`401 unauthorized`	The key is wrong or Aider did not read the variable. Open a new terminal.
`404 model_not_found`	The model id is wrong. After `openai/` comes the full id, with the slash.
`404 not_found`	The address is wrong: it must end in `/v1`.
`403 insufficient_scope`	The key does not have `ai:write`.

Once the test answer shows, switch the variable to the `prod_` key and open a new terminal. With the `sandbox_` key, the model list, the prices and the balance the API shows are the real ones.

RECOMMENDED

Want to try our models in Aider without spending? Visit the Coding with AI page.
